

Enabling you to connect.®

4G Failover

Today's connected world demands a reliable business continuity failover solution. Every minute of network downtime will cost organizations time and money. Not having a proper failover solution in place could disrupt productivity and forfeit revenue. With Powernet's 4G failover solution businesses can trust that they will stay online when it matters most.

Wireless Connectivity

4G failover is built to work as either a primary or backup connection, delivering serviceable internet access to areas with limited broadband availability. The solution utilizes an embedded 4G/LTE certified modem that wirelessly connects businesses to their 4G/LTE and 3G cellular provider. When a network connection fails, 4G takes control, allowing businesses to continue performing necessary tasks until service is restored.

Simplified Implementation

When installing the 4G router, users can measure cellular signal strength in the venue to determine the best location for the device. The router can coexist with almost any existing WAN, meaning there is no need to make any changes to your network.

Powernet's 4G failover solution also allows users to access a cloud-based management portal. Reports such as signal strength, network connectivity, data usage and more can be viewed in the portal.

Cost-Effective

4G failover is a cost-effective solution, proving to be less expensive than paying monthly for a secondary service you may never use. Users can receive notifications alerting them of when their 4G router is active and track data usage in the portal. Customers will always know what to expect when their bill arrives.

About Powernet

Powernet enables businesses to connect internally and externally through innovative technology solutions. Combining more than 24 years of telecom experience with Wi-Fi, voice, data, IT managed services and carrier services, we provide our partners and clients the unparalleled service and innovative technology they need to achieve their business goals.

Benefits of 4G Failover

- Avoid lost sales, slow transactions and frustration.
- Can serve as primary or backup connection at your location.
- Supports any 4G/LTE and 3G cellular provider (AT&T 4G SIM card available).
- Access to cloud-based management application.
- 4G/LTE Certified embedded cellular modem.
- Coexists with almost any existing WANs.
- Secondary failover link improves continuity.
