

Enabling you to connect.™

## PowerConnect®

PowerConnect enables businesses to terminate local and long distance calls over the Powernet network via a private, dedicated connection. It doesn't matter if you have TDM or SIP service, PowerConnect integrates with your existing system as a cost-effective means to improve your telecommunications privacy and ensure the safety of your business' and clients' personal information.

### Better Network, Lower Cost

Whether you have one location or plan to expand to multiple locations in the near future, PowerConnect offers you the greatest flexibility and scalability of any network. Add as you go without building out the entire infrastructure at once and integrate with existing IP technology and infrastructure already in place. We also utilize monitoring, alerts and standardized review processes to ensure maximum up-time and minimize disruptions in the event of a problem. Our experienced engineers and techs have the knowledge to get you up quickly and keep you running. All of this adds up a lower total cost of ownership for an easy to maintain and manage system.

### About Powernet

Powernet enables businesses to connect through innovative telecommunications solutions. With networking, voice, data, call center and carrier services, we have the technology and expertise to meet the needs of any size business.
