TARIFF FORMAT

- A. Page Numbering - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new Pages are occasionally added to the tariff. When a new Page is added to the Tariff between Pages which are already in effect, a decimal is added. For example, a new Page added between Pages 14 and 15 would be Page 14.1.

- B. Page Revisions - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current version of the page on file with the WPSC. For example, the 4th revision of page 14 would cancel the 3rd revision of that page. Because of the various suspension periods, deferrals, etc. the WPSC follows in their tariff approval process, the most current page number on file with the WPSC is not always the tariff page in effect. Consult the Check Page for the page currently in effect.

- C. Paragraph Numbering Sequence - There are nine levels of paragraph numbering designating paragraphs, subparagraphs, etc. Each level of coding is a division of the next higher level paragraph:

- 2.
- 2.1
- 2.1.1
- 2.1.1.1
- 2.1.1.1.1
- 2.1.1.1.1.1
- 2.1.1.1.1.1.1
- 2.1.1.1.1.1.1.1

5 Services

5.1 Application of Rates

- 5.1.1 Introduction - The regulations set forth in this section govern the application of rates for services contained in other sections of this tariff. An application for service, whether made orally, in writing or by use of service, establishes a contract between the Company and the Customer or Business Customer pursuant to the terms and conditions included within this tariff. Neither the contract nor any rights acquired thereunder may be assigned or in any manner transferred to a third party by the Customer or Business Customer without the Company's written approval.
- 5.1.2 Charges Based on Duration of Use - Where charges for a specific service are specified based on the duration of use, such as the duration of a telephone call, the following rules apply:
- 5.1.2.1 Calls are measured in durational increments identified for each service. All calls held for a fraction of a measurement increment are rounded up to the next whole measurement unit.
- 5.1.2.2 Timing on completed calls begins when the call is answered by the called party. Answering is determined by hardware answer supervision in all cases where this signaling is provided by the terminating local carrier and any intermediate carrier(s). Timing for operator service person-to-person calls starts with completion of the connection to the person called or an acceptable substitute, or to the PBX station called.
- 5.1.2.3 Timing terminates on all calls when the calling party hangs up or the Company's network receives and off-hook signal from the terminating carrier.
- 5.1.2.4 Calls originating in one time period and terminating in another will be billed in proportion to the rates in effect during different segments of the call and will be billed according to applicable eastern standard or eastern daylight savings time.

5.4 Prepaid Calling Card Services - Prepaid Calling Card Service is a prepaid long distance calling card service that allows Customers to purchase cards in predetermined amounts for long distance usage. Customers access the service by dialing a Company specified access code. As a Customer accesses the service, usage rates and taxes are automatically deducted from the remaining card balance. Customers are notified with a usage remaining message each time a call is placed. Calls in progress will be terminated if the balance on the Prepaid Calling Card is insufficient to cover the charges associated with the call. When the card balance reaches zero, the user must purchase another card or have the card recharged pursuant to instructions the Company provides to users purchasing the cards. Calls are billed in initial and subsequent increments of one minute. Any fractional portion of a billing increment is rounded up to the next highest billing increment.
