EXPLANATION OF SYMBOLS

When changes are made in any price list page, a revised page will be issued replacing the price list page affected. Changes will be identified on the revised page through the use of the following symbols:

- (D) Delete or Discontinue
- (I) Change resulting in an Increase to a Customer's bill
- (M) Moved from another Price List location
- (N) New
- (R) Change resulting in a Reduction to a Customer's bill
- (T) Change in Text or regulation but no change in rate or charge

PRICE LIST FORMAT

- A. Page Numbering** - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, occasionally, when a new page is added between pages already in effect, a decimal is added. For example, a new page added between Pages 14 and 15 would be 14.1.
- B. Page Revision Numbers** - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Commission. For example, the 4th revised Page 14 cancels the 3rd Revised Page 14. Because of various suspension periods, deferrals, etc. the Commission follows in its approval process, the most current page number on file with the Commission is not always the page in effect. Consult the Check Sheet for the page currently in effect.
- C. Paragraph Numbering Sequence** – There are nine levels of paragraph coding. Each level of code is subservient to its next higher level:
- 2.
 - 2.1.
 - 2.1.1
 - 2.1.1.A.
 - 2.1.1.A.1.
 - 2.1.1.A.1.(a).
 - 2.1.1.A.1.(a).I.
 - 2.1.1.A.1.(a).I.(i).
 - 2.1.1.A.1.(a).I.(i).(1).
- D. Check Pages** - When a price list filing is made with the Commission, an updated Check Page accompanies the price list filing. The Check Page lists the pages contained in the price list with a cross reference to the current revision number. When new pages are added, the Check Sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc., remains the same, just revised revision levels on some Pages). The price list user should refer to the latest Check Page to find if a particular page is the most current on file with the Commission.

3.2. CHARGES BASED ON DURATION OF USE

3.2.1. Duration Rules

Where charges for a Service are specified based on the duration of use, such as the duration of a telephone call, the following rules apply:

- A. Calls are measured in durational increments identified for each Service. All calls that are fractions of a measurement increment are rounded-up to the next whole unit.
- B. Timing on completed calls begins when the call is answered by the called party. Answering is determined by hardware answer supervision in all cases where this signaling is provided by the terminating local Carrier and any intermediate Carrier(s). Timing for operator Service Person-To-Person calls start with completion of the connection to the person called or an acceptable substitute, or to the PBX Station called.
- C. Timing terminates on all calls when the calling party hangs up or PNG's network receives an off-hook signal from the terminating Carrier.
- D. Calls originating in one time period and terminating in another will be billed in proportion to the rates in effect during different segments of the call.
- E. All times refer to local time.

3.2.2. Applicable Rate Periods

Where charges for a service are based on rate periods, applicable rate periods are as indicated in the chart below, unless otherwise specified:

3.3. RATES BASED UPON DISTANCE

3.3.1 GENERAL

Where charges for Service are specified based upon distance, the following rule applies:

Distance between two points is measured as airline distance between the Rate Centers of the originating and terminating telephone lines. The Rate Center is a set of geographic coordinates, as referenced in National Exchange Carrier Association, Inc. tariff FCC No. 4, associated with each NPA-NXX combination (where NPA is the area code and NXX is the first three digits of a seven digit telephone number). Where there is no telephone number associated with an Access Line on PNG's network (such as a dedicated 800 or WATS Access Line), PNG will apply the Rate Center of the Customer's main billing telephone number.

3.3.2. Calculating Distance

Where applicable, the distance between the originating point and that of the destination point is calculated by using the "V" and "H" coordinates as defined by NECA tariff FCC No. 4, in the following manner:

Step 1: Obtain the "V" and "H" coordinates for the originating point and the destination point.

Step 2: Obtain the difference between the "V" coordinates of each of the Rate Centers. Obtain the Difference between the "H" coordinates.

Step 3: Square the differences obtained in Step 2.

Step 4: Add the squares of the "V" difference and "H" difference obtained in Step 3.

Step 5: Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.

Step 6: Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating serving wire centers.

Formula:

$$\sqrt{\frac{(V1-V2)^2 + (H1-H2)^2}{10}}$$

PRI is a Digital System 1 (DS1) comprised of 23 B channels and 1 D channel. Each B channel uses the full 64k for the voice traffic. The single D channel is used for call setup, tear down and other signaling. All channels work at 64kbps. PRI uses the signaling standard Common Channel Signaling No. 7 (SS7). PRI is used when the customer has a digital PBX and PRI interface card. Available with 100,000 included minutes of local usage or 300,000 included minutes of local usage. This business service is available in 12, 24, or 36 month terms.
- D. **Business Plan 4 – Dedicated Local Digital T1 (digital or analog):** Digital T1 uses in band signaling to support 24 simultaneous calls. Each 64k voice channel uses ~8k for signaling. This leaves 56k for voice traffic. A Digital T1 Trunk is used when a digital PBX and digital T1 interface card are available. Available with 100,000 included minutes of local usage or 300,000 included minutes of local usage. This business service is available in 12, 24, or 36 month terms.
- E. **Business Plan 5 – Integrated Voice and Data (digital or analog):** Combines voice and data traffic over a single circuit. Bandwidth is dynamically allocated between voice and data, as needed. This plan is available in line and trunk configurations with multiple voice channel and data bandwidth options. All options are scalable. This business service is available in 12, 24, or 36 month terms.

4.7. SERVICE PROVIDER OPTIONS (T)

4.7.1 No Primary Interexchange Carrier (PIC) Option

Customers have the option of not selecting a toll provider as primary carrier for intraLATA and/or interLATA toll traffic, thus requiring the customer to use an access code to obtain toll providers' services (i.e., 1010-XXX).

4.7.2 Two PIC Option (T)

Customers will be able to select one toll provider for intraLATA toll calls and, if so desired, the same or another toll provider for interLATA toll calls.

4.7.3. Preferred Carrier Freeze (PCF) (T)

The Company offers a free service called Preferred Carrier Freeze. This service is available to all Customers. PCF allows Customers to designate their local long distance (intraLATA) provider, long distance (interLATA) provider, and a local exchange service provider as permanent choices which may not be changed absent further authorization from the Customer. The Company will send a letter to each Customer upon initiation or transfer of service, which informs the Customer of the option to freeze his/her intraLATA, interLATA and local service provider choice(s). At the time a Customer contacts the Company to establish a freeze, a representative will advise him/her on how to facilitate a change of provider(s) on a frozen account.

4.7.4 Carrier Change Charge (T)

After the initial 30-day period, or at any time after an initial carrier selection has been made, any carrier selection or change is subject to a Non-Recurring Charge of \$9.99 per change, per line.

SECTION 4 – RATES AND CHARGES, Continued

ICB rates will be offered to the Customer in writing and on a non-discriminatory basis

5.3. CUSTOM CALLING FEATURES

(M)

5.3.1. Generally

Certain Custom Calling Features in this section are included in Network Exchange Bundled Service packages offered by PNG. Other Custom Calling Services described below also may be purchased in addition to the Services included in a particular package but these features are available only when purchased in combination with a PNG provided Network Exchange Bundled Service.

5.3.2. Feature Descriptions

- A. Anonymous Call Rejection** is an arrangement that allows a called party to reject calls from parties that have activated the *67 Per Call Blocking feature to prevent the display of the calling telephone numbers to Caller ID - Number Only subscribers, or to prevent the display of the calling telephone numbers and associated main listed names to Caller ID subscribers. When Anonymous Call Rejection is activated, such calls will be routed to an announcement which tells the calling party that the called party will not accept calls from callers who have chosen to prevent the display of their telephone numbers and names. The calling party will be instructed to hang up and place the call again, without activating the *67 Per Call Blocking feature. Customers may activate or deactivate Anonymous Call Rejection by dialing an activation code. This arrangement is included with the Caller ID – Number Only and Caller ID features and is available to non-Caller ID –Number Only/Caller ID Customers.
- B. Call Blocking** – allows Customers to block calls from different telephone numbers. A screening list is created by the Customer either by adding the last number with the line (incoming or outgoing) or by pre-selecting the telephone number to be blocked. Callers from such number hear an announcement that the calling party is not accepting calls.

- C. Call Forwarding - Fixed, Busy Line No Answer** – This feature, when activated, redirects attempted terminating calls to another PNG-specified line. Call originating ability is not affected by Call Forwarding-Fixed, Busy Line No Answer. The calling party is billed for the call to the called number. If the forwarded leg of the call is chargeable, the Customer with the Call Forwarding – Fixed, Busy Line No Answer is billed for the forwarded leg of the call.
- D. Call Forwarding -Variable** – a Customer activated feature that automatically transfers all incoming calls from the Customer’s telephone number to another dialable telephone number until the Customer deactivates the feature. The calling party is billed for the call to the called number. If the forwarded leg of the call is chargeable, the Customer with the Call Forwarding – Variable is billed for the forwarded leg of the call.
- F. Caller ID Per Line Blocking** – allows a Customer to prevent the transmission and display of their directory number and/or directory name information on outgoing calls. Line Blocking is in operation on a continuous basis and is applicable on all outgoing calls from Customer’s blocked line. Line Blocking does not prevent transmission of the calling party information to emergency Services that utilize automatic number identification for delivery of the calling information.

- G. Caller ID with Name** – allows a Customer to see a caller’s name and number previewed on a display screen before the call is answered allowing a Customer to prioritize and/or screen incoming calls. Caller ID records that name, number, date and time of each incoming call – including calls that are not answered by the Customer. Caller ID Service requires the use of specialized Customer provided equipment not provided by PNG. It is the Customer’s responsibility to obtain such Customer provided equipment.
- H. Speed Calling** – allows a Customer to dial selected numbers by means of an abbreviated code. This feature is available in either an 8 number or a 30 number capacity. The Speed Calling list can only accommodate a number consisting of 15 digits or less.
- I. Three-Way Calling** – Permits the Customer to add a third party to an established connection. When the third party answers, a two-way conversation can be held before adding the original party for a three-way conference. The Customer initiating the conference controls the call and may Disconnect the third party to reestablish the original connection or establish a connection to a different third party. The feature may be used with both outgoing and incoming calls.
