C. Rates Based Upon Distance

I. General

Where charges for Service are specified based upon distance, the following rule applies:

Distance between two points is measured as airline distance between the Rate Centers of the originating and terminating telephone lines. The Rate Center is a set of geographic coordinates, as referenced in National Exchange Carrier Association, Inc. tariff FCC No. 4, associated with each NPA-NXX combination (where NPA is the area code and NXX is the first three digits of a seven digit telephone number). Where there is no telephone number associated with an Access Line on PNG's network (such as a dedicated 800 or WATS Access Line), PNG will apply the Rate Center of the Customer's main billing telephone number.

C. Rates Based Upon Distance, Continued

II. Calculating Distance

Where applicable, the distance between the originating point and that of the destination point is calculated by using the "V" and "H" coordinates as defined by NECA tariff FCC No. 4, in the following manner:

Step 1: Obtain the "V" and "H" coordinates for the originating and destination point.

Step 2: Obtain the difference between the "V" coordinates of each of the Rate Centers. Obtain the Difference between the "H" coordinates.

Step 3: Square the differences obtained in Step 2.

Step 4: Add the squares of the "V" difference and "H" difference obtained in Step 3.

Step 5: Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.

Step 6: Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating serving wire centers.

Formula:

$$\sqrt{\frac{(V1-V2)^2 + (H1-H2)^2}{10}}$$

Certain Custom Calling Features in this Section are included in certain Network Exchange Bundled Service packages offered by PNG. Other Custom Calling Services described below also may be purchased in addition to the Services included in a particular package but these features are available only when purchased in combination with a PNG provided Network Exchange Bundled Service.

**3.4.2. Feature Descriptions**

- A. Call Waiting ID (includes Caller ID with name) - provides a tone signal to indicate to a Customer already engaged in a telephone call that a second caller is attempting to dial in and allows a Customer to see a caller's name and number previewed on a display screen allowing a Customer to prioritize and/or screen incoming calls. This feature permits the Customer to place the first call on hold, answer the second call and then alternate between both callers. Call Waiting ID Service requires the use of specialized Customer provided equipment not provided by PNG. It is the Customer's responsibility to obtain such Customer provided equipment. (T)
- B. Caller ID with Name/Number – allows a Customer to see a caller's name and number previewed on a display screen before the call is answered allowing a Customer to prioritize and/or screen incoming calls. Caller ID records that name, number, date and time of each incoming call – including calls that are not answered by the Customer. Caller ID Service requires the use of specialized Customer provided equipment not provided by PNG. It is the Customer's responsibility to obtain such Customer provided equipment.
- C. Call Waiting – provides a tone signal to indicate to a Customer already engaged in a telephone call that a second caller is attempting to dial into the line. This feature permits the Customer to place the first call on hold, answer the second call and then alternate between both callers.
- D. Call Blocking (Call Screening) – allows Customers to block calls from different telephone numbers. A screening list is created by the Customer either by adding the last number with the line (incoming or outgoing) or by pre-selecting the telephone number to be blocked. Callers from such number hear an announcement that the calling party is not accepting calls.

**SECTION 3 – DESCRIPTION OF SERVICE, Continued**

**3.4. CUSTOM CALLING FEATURES, Continued**

**3.4.2 Feature Descriptions, Continued**

- E. Anonymous Call Rejection (Privacy Manager) – is an arrangement that allows a called party to reject calls from parties that have activated the \*67 Per Call Blocking feature to prevent the display of the calling telephone numbers to Caller ID - Number Only subscribers, or to prevent the display of the calling telephone numbers and associated main listed names to Caller ID subscribers. When Anonymous Call Rejection is activated, such calls will be routed to an announcement which tells the calling party that the called party will not accept calls from callers who have chosen to prevent the display of their telephone numbers and names. The calling party will be instructed to hang up and place the call again, without activating the \*67 Per Call Blocking feature. Customers may activate or deactivate Anonymous Call Rejection by dialing an activation code.
- F. Call Forwarding, Variable – a Customer activated feature that automatically transfers all incoming calls from the Customer’s telephone number to another dialable telephone number until the Customer deactivates the feature. The calling party is billed for the call to the called number. If the forwarded leg of the call is chargeable, the Customer with the Call Forwarding – Variable is billed for the forwarded leg of the call.
- G. Speed Dial – allows a Customer to dial selected numbers by means of an abbreviated code. This feature is available in an 8 number capacity. The Speed Dial list can only accommodate a number consisting of 15 digits or less.
- H. Three-Way Calling – Permits the Customer to add a third party to an established connection. When the third party answers, a two-way conversation can be held before adding the original party for a three-way conference. The Customer initiating the conference controls the call and may Disconnect the third party to reestablish the original connection or establish a connection to a different third party. The feature may be used with both outgoing and incoming calls.

**3.4.2. Feature Descriptions, Continued**

- I. Per Use Custom Calling Features (T)
  - I. Call Return (Automatic Call back) (\*69) – This Service allows a Customer to return the most recent incoming call and hear an announcement of the last telephone number that called. To activate Return Call (\*69), the Customer dials a code, then hears an announcement of the telephone number of the last party that called. If the Customer wishes to return the call right away, voice prompts will instruct the Customer to dial a certain digit and the call will automatically be returned. (M)
  - II. Repeat Dial (Busy Redial) (\*66) – automatically redials the last telephone number the Customer dialed. If the number is busy, this Service will keep dialing the busy number up to 30 minutes and alert the Customer with a special ring when the line is free. The call will automatically be made when the Customer picks up the receiver. Repeat Dialing does not tie up the Customer’s line, allowing the Customer to make and receive calls while it attempts to redial in the background (T)
- J. Call Trace - Allows a called party to initiate an automatic trace of the last call received. CallTrace is available on a usage basis only. After receiving the call which is to be traced, the Customer dials a code and the traced telephone number is automatically sent to the Company for action. The Customer originating the trace will not receive the traced telephone number. The results of the trace will be furnished only to legally constituted law enforcement agencies or authorities upon proper request by them. (T)

## SECTION 4 – SERVICE RATES AND CHARGES, Continued

### 4.4. INTRALATA TOLL PRESUBSCRIPTION

**4.4.1. Generally** - IntraLATA Presubscription is a procedure whereby an End User designates to the Company the IntraLATA Toll Provider (ITP) which the Customer wishes to be the Carrier of choice for IntraLATA toll calls. Such calls are automatically directed to the designated Carrier without the need to use Carrier access codes or additional dialing to direct the calls to the designated Carrier. IntraLATA presubscription does not prevent an End User, who has presubscribed to an ITP, from using Carrier access codes or additional dialing to direct calls to an alternative IntraLATA toll Carrier on a per call basis.

Each Carrier will have one or more access codes assigned to it for various types of service. When an End User selects a Carrier as its preferred ITP only one access code of that Carrier may be incorporated into the switching system of the Company permitting access to that Carrier by the End User without dialing an access code. Should the same End User desire access to the ITP's other services, he must dial the access code associated with such other services.

An ITP must use Feature Group D (FGD) Switched Access to qualify as an ITP unless prior arrangements have been made with or by the Company. ITPs must submit an Access Service Request (ASR) prior to the IntraLATA toll presubscription conversation date or prior to the date on which the Carrier proposes to begin participating IntraLATA toll presubscription, unless prior arrangements have been made with the Company.

**4.4.2. Terms and Conditions Applicable to IntraLATA Toll Presubscription** - Selection of an IntraLATA toll provider by an End User is subject to the terms and conditions following:

- A. At the option of the ITP, the nonrecurring charge for a change in IntraLATA toll presubscription, as provided, here in, may be billed to the ITP, instead of the End User. This may involve charges resulting from End User initial free choice PIC changes, as specified herein.
- B. This option for the ITP to be billed for the PIC change charge instead of the End User is not available for orders placed directly via the Company's business offices.

**4.4.3. Presubscription Charge Application**

- A. Generally. IntraLATA Presubscription is a procedure whereby an subscriber designates to the Company the IntraLATA Toll Provider (ITP) which the Customer wishes to be the Carrier of choice for IntraLATA toll calls. Such calls are automatically directed to the designated Carrier without the need to use Carrier access codes or additional dialing to direct the calls to the designated Carrier. IntraLATA presubscription does not prevent an subscriber, who has presubscribed to an ITP, from using Carrier access codes or additional dialing to direct calls to an alternative IntraLATA toll Carrier on a per call basis. IntraLATA Presubscription will become effective upon the initial offering of certified Local Exchange Service.
- B. IntraLATA Presubscription Options - Subscribers may exercise their presubscription choice, either by contacting the Company or by contacting the ITP directly. The charge for the change will be billed to the new ITP at the discretion of the Company. Subscriber's choices which constitute exercising the choice are:
- I. The subscriber may select the Company as the presubscribed Carrier for IntraLATA toll calls subject to presubscription.
  - II. The subscriber may select her/his InterLATA toll Carrier as the presubscribed Carrier for IntraLATA calls subject to presubscription.
  - III. The subscriber may select a Carrier other than the Company or the subscriber's InterLATA toll Carrier as the presubscribed Carrier for IntraLATA toll calls subject to presubscription.
  - IV. The subscriber may select no presubscribed Carrier for IntraLATA toll calls subject to presubscription which will require the subscriber to dial a Carrier access code to route all IntraLATA toll calls to the Carrier of choice for each call.

C. Rules and Regulations

- I. Subscribers will retain their current dialing arrangements until they request that their dialing arrangements be changed.
- II. New subscribers may select from the options above for IntraLATA Presubscription.
- III. Subscribers may change their selected option and/or their presubscribed IntraLATA toll Carrier at any time subject to charges specified below.

**4.4.4. IntraLATA Presubscription Procedures**

- A. New subscribers will be asked to select an IntraLATA toll Carrier(s) at the time the subscriber places an order to establish Local Exchange Service with the Company. The Company will process the subscriber's order for IntraLATA service. The selected Carrier(s) will confirm their respective subscribers' verbal selection by any of the methods set forth in the Carrier selection rules of the Federal Communications Commission and the GA PSC. All new subscriber's initial requests for IntraLATA Toll Service presubscription shall be provided free of charge.
- B. If a new subscriber is unable to make a selection at the time the new subscriber places an order to establish Local Exchange Service, the Company will read a random listing of all available IntraLATA Carriers to aid the subscriber in selection. If selection is still not possible, the Company will inform the subscriber that he/she will be given 90 calendar days in which to inform the Company of an IntraLATA toll Carrier presubscription free of charge. Until the subscriber informs the Company of his/her choice for IntraLATA toll Carrier, the subscriber will not have a presubscribed IntraLATA toll Carrier, but rather will be required to dial a Carrier access code to route all IntraLATA toll calls to the Carrier(s) of choice. Subscribers who inform the Company of a choice for IntraLATA toll presubscription within the 90-day period will not be assessed a Service charge for the initial Subscriber request.

**4.4. INTRALATA TOLL PRESUBSCRIPTION, Continued**

- C. Subscribers of record may initiate an IntraLATA presubscription change at any time subject to the charges specified below. If a Customer of record inquires of the Company of the Carriers available for IntraLATA toll presubscription, the Company will read a random listing of all available IntraLATA Carriers to aid the subscriber in selection.

**4.4.5. IntraLATA Presubscription Charges**

**7.2. CUSTOM CALLING FEATURES**

(D) (M)

**7.2.1. Generally**

Certain Custom Calling Features in this Section are included in certain Network Exchange Bundled Service packages offered by PNG. Other Custom Calling Services described below also may be purchased in addition to the Services included in a particular package but these features are available only when purchased in combination with a PNG provided Network Exchange Bundled Service.

**7.2.2. Feature Descriptions**

- A. Anonymous Call Rejection – is an arrangement that allows a called party to reject calls from parties that have activated the \*67 Per Call Blocking feature to prevent the display of the calling telephone numbers to Caller ID - Number Only subscribers, or to prevent the display of the calling telephone numbers and associated main listed names to Caller ID subscribers. When Anonymous Call Rejection is activated, such calls will be routed to an announcement which tells the calling party that the called party will not accept calls from callers who have chosen to prevent the display of their telephone numbers and names. The calling party will be instructed to hang up and place the call again, without activating the \*67 Per Call Blocking feature. Customers may activate or deactivate Anonymous Call Rejection by dialing an activation code. This arrangement is included with the Caller ID – Number Only and Caller ID features and is available to non-Caller ID –Number Only/Caller ID Customers.
- B. Call Blocking – allows Customers to block calls from different telephone numbers. A screening list is created by the Customer either by adding the last number with the line (incoming or outgoing) or by pre-selecting the telephone number to be blocked. Callers from such number hear an announcement that the calling party is not accepting calls.

**7.2.2. Feature Descriptions, Continued**

- C. Call Forwarding, Fixed, Busy Line No Answer – This feature, when activated, redirects attempted terminating calls to another PNG-specified line. Call originating ability is not affected by Call Forwarding-Fixed, Busy Line No Answer. The calling party is billed for the call to the called number. If the forwarded leg of the call is chargeable, the Customer with the Call Forwarding , Fixed, Busy Line No Answer is billed for the forwarded leg of the call.
- D. Call Forwarding, Variable – a Customer activated feature that automatically transfers all incoming calls from the Customer’s telephone number to another dialable telephone number until the Customer deactivates the feature. The calling party is billed for the call to the called number. If the forwarded leg of the call is chargeable, the Customer with the Call Forwarding – Variable is billed for the forwarded leg of the call.
- G. Caller ID Per Line Blocking – allows a Customer to prevent the transmission and display of their directory number and/or directory name information on outgoing calls. Line Blocking is in operation on a continuous basis and is applicable on all outgoing calls from Customer’s blocked line. Line Blocking does not prevent transmission of the calling party information to emergency Services that utilize automatic number identification for delivery of the calling information.

**7.2. CUSTOM CALLING FEATURES, Continued**

**7.2.2 Feature Descriptions, Continued**

- G. Caller ID with Name – allows a Customer to see a caller’s name and number previewed on a display screen before the call is answered allowing a Customer to prioritize and/or screen incoming calls. Caller ID records that name, number, date and time of each incoming call – including calls that are not answered by the Customer. Caller ID Service requires the use of specialized Customer provided equipment not provided by PNG. It is the Customer’s responsibility to obtain such Customer provided equipment.
- H. Speed Dial – allows a Customer to dial selected numbers by means of an abbreviated code. This feature is available in either an 8 number or a 30 number capacity. The Speed Dial list can only accommodate a number consisting of 15 digits or less.
- I. Three-Way Calling – Permits the Customer to add a third party to an established connection. When the third party answers, a two-way conversation can be held before adding the original party for a three-way conference. The Customer initiating the conference controls the call and may Disconnect the third party to reestablish the original connection or establish a connection to a different third party. The feature may be used with both outgoing and incoming calls.

**7.2.3 Per Use Customer Calling Features**

- A. Caller ID Blocking (\*67) – blocks the Customer’s name and number from being transmitted on all outgoing calls from a particular line. Per call blocking is achieved by pressing \*67 prior to each call, while per line blocking blocks the name and number of every outgoing call. Dialing a special code prior to dialing the number of the person being called can unblock the number and name. Caller ID Blocking is provided at no charge.
